Research Interests

My research interests lie in applied microeconometrics and economic policy. I am drawn to empirical questions in labour and public economics, and in how markets and organisations shape incentives and behaviour, where credible identification and careful measurement matter. Through my work as a research assistant, I have developed a particular interest in econometric methods for panel data and in the role of machine learning in econometrics.

Education

Erasmus University Rotterdam — Rotterdam, Netherlands
Double Bachelor of Science — *2023 – 2027*

- Programmes: Econometrics and Operations Research; Economics and Business Economics
- GPA: 8.78/10; expected *Summa Cum Laude*
- Majors: Data Science in Econometrics; Economics of Markets and Organisations
- Selected coursework: Analysis, Probability Theory, Stochastic Processes, Linear Algebra, Multivariate Statistics, Econometrics, Causal Inference, Applied Microeconomics, Macroeconomics

Erasmus University Rotterdam — Rotterdam, Netherlands
Bachelor of Arts, Philosophy (Major: Philosophy of Economics) — *2024 – 2027*

Sungkyunkwan University (SKKU) — Seoul, South Korea
Exchange semester (Economics and Business; Business Data Analytics) — *Fall 2026*

International Baccalaureate — Bangalore, India
High School Diploma (42/45); Valedictorian — *2021 – 2023*

Research Experience

Erasmus School of Economics — Rotterdam, Netherlands
Research Assistant to Prof. Dr. Philip Hans Franses — Econometrics — *Sep 2026 – Present*

- Extending a measurement-error correction framework (Reeves et al.) to new cross-sectional datasets, recovering true regression coefficients from privacy-scrambled explanatory variables.
- Implementing simulation and empirical pipelines in R to benchmark naive versus corrected logistic regression under additive Gaussian noise, validating recovery against published and replicated reference results.

Erasmus School of Economics — Rotterdam, Netherlands
Research Assistant to Dr. Andreas Pick — Econometrics — *Sep 2025 – Present*

- Conducted a literature review of econometric methods for correlated parameter heterogeneity in panel data, including correlated fixed effects and pooling-versus-heterogeneity testing, to inform model specification for a working paper on panel structural VARs.
- Independently sourced, validated, and cleaned panel datasets in Python (pandas) for an empirical application of correlated heterogeneity across panel units.
- Replicating existing forecasting studies that model correlated parameter heterogeneity, as a basis for developing extensions.

Working Papers

"Earnings Chasing Deals? Impact of Acquirer's EBITDA on Private Equity Valuations"
With Bartlomiej Slomka; supervised by Prof. Dr. Robert Dur — *Sep 2024 – Sep 2025*

- Bachelor Honours Class paper, Erasmus School of Economics; presented at the class conference.
- Collected and cleaned deal-level data from Orbis M&A, filtering 4,875 completed retail buyouts down to a final sample of 143 with complete financials.
- Estimated a log-linear regression of deal value on acquirer and target EBITDA and target assets with year fixed effects and Newey–West standard errors; ran Breusch–Pagan and residual diagnostics.
- No significant effect of acquirer EBITDA; significant negative association with target assets (1%).

"Determinants of Working Hours Across Countries" (single-authored seminar paper)
Economics of Markets and Organisations seminar, Erasmus School of Economics

- Studied how average working hours per employed person relate to income and labour-market characteristics across 16 countries, 2010–2024 (balanced panel).
- Compared five specifications (pooled OLS, country fixed effects, year fixed effects, quadratic log GDP, full controls) to see how estimates change once country and time heterogeneity are absorbed.
- Tested for a non-linear income–hours relationship using a quadratic in log GDP, with country-clustered standard errors.

Skills and Interests

Programming and software: R, Python (pandas), Stata, MATLAB, LaTeX, Java, AIMMS, Excel; AI-assisted coding (Claude Code, Codex)
Empirical methods: Panel-data econometrics, causal inference, time-series forecasting, Monte Carlo simulation, machine learning
Languages: English (C2), French (B1), Hindi (B2), Arabic (B1), Kannada (Native)
Interests: Travel, soccer, teaching, learning languages

Teaching Experience

Erasmus School of Economics Rotterdam, Netherlands
Teaching Assistant *Dec 2024 – Present*

- Courses: Non-linear Optimisation, Academic Research, Academic Writing, Research Project; Head TA, ESE Excellence Programme (Energy Markets; Supply Networks).
- Contributed to grading and exam preparation for 300+ bachelor students; led interactive tutorial sessions over 8 weeks per course.

Freelance Academic Tutor Remote
Private Tutor *Jul 2023 – Present*

- Tutoring high school Mathematics and Economics and undergraduate Calculus; designed individual study plans to improve exam performance.

Honors and Awards

- Winner, Dutch National Economics Olympiad (NEO) 2026
- ESE Bachelor's Honours Class; Honours Research Class; Econometrics Excellence Programme; ESPhil Honours Class

Projects and Activities

EMOP seminar volume (supervised by Prof. Dr. Robert Dur)

- Edited and compiled the seminar volume of the Economics of Markets and Organisations major (2026–27 cohort), converting approximately 33 student chapters into a structured five-part book.

ESPhil Honours Class project

- Studying how the scheduling of academic deadlines affects student wellbeing, with attention to circadian rhythm, using student and faculty interviews.
